# How to Set ICC Profiles in Dry-Lab Printers

1. **If You Are Using Adobe Photoshop**

- Open the **Print** window.
- Select your **printer**.
- In **Color Handling**, choose: **Photoshop Manages Colors**.
- Select the **correct ICC profile** from the list.
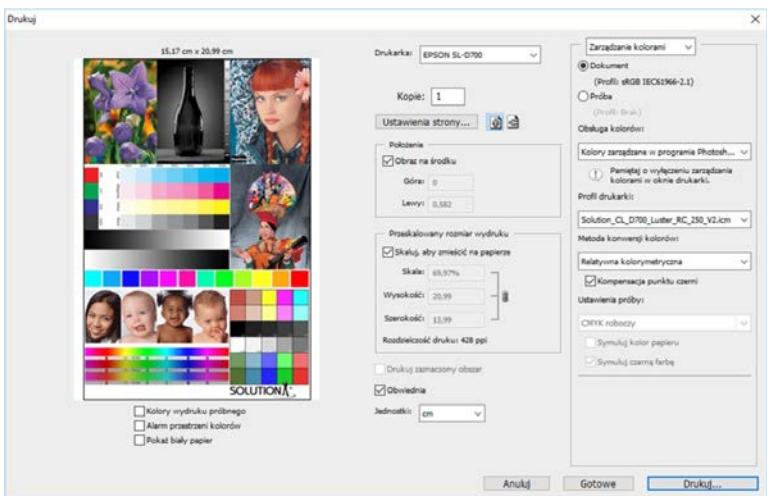

- Click **Page Setup**.
- In the printer preferences window: select the **paper type**, select the **print quality**, set **No Color Adjustment**
- Click **OK**.
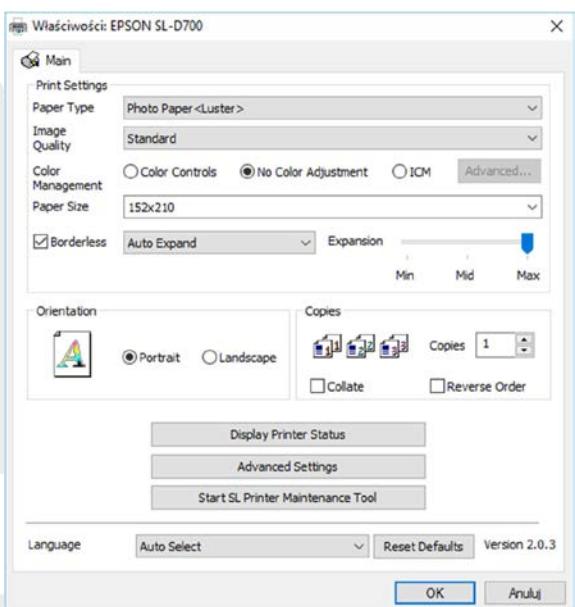

Return to the Photoshop print window and click **Print**.

2. If You Are Using Other Software (Not Photoshop)

(All settings must be configured in the printer driver)

- Open **Control Panel**.
- Select **Devices and Printers**.
- Right-click on your printer icon and select **Printer Properties**.
- Go to the **Color Management** tab and confirm the selection.
- Select your printer and check: **Use my settings for this device**.
- From the profile selection list choose: **Manual**.
- Click **Add…** to add your ICC profile.
- After adding the profile: select it and click **Set as Default Profile**
- Close the window.
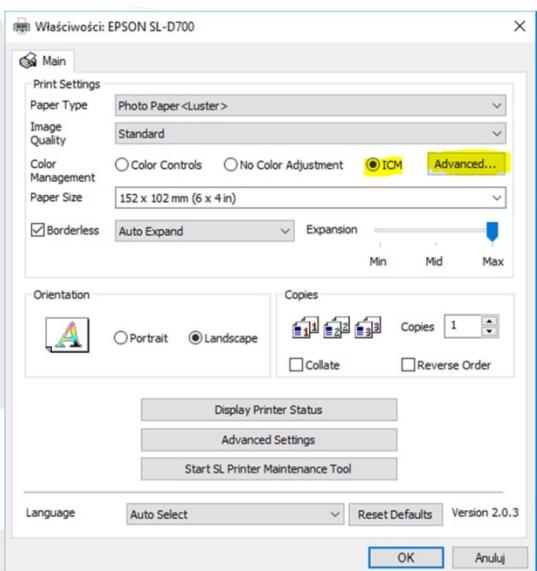

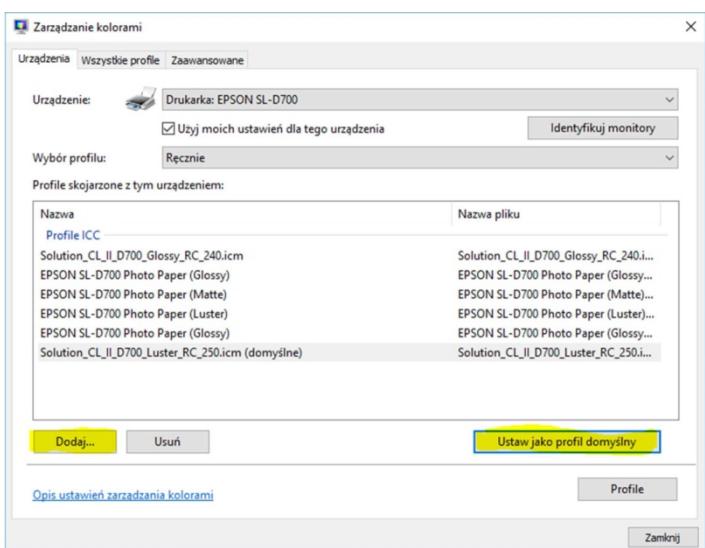

Driver Configuration – ICM Mode

- Open **Printer Preferences**.
- Select **ICM** mode.
- Click the **Advanced…** button.
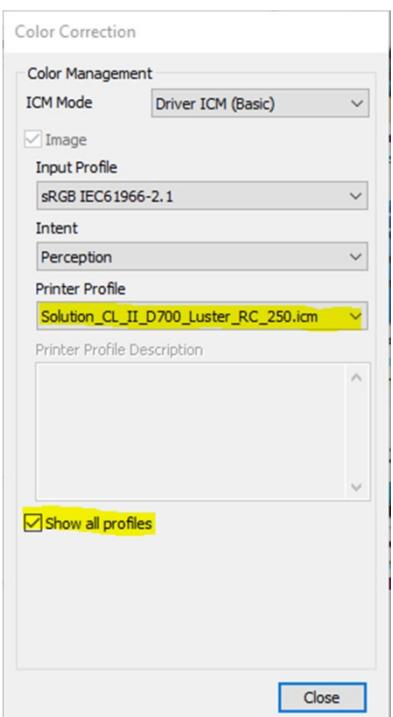

- In the new window: check **Show all profiles** and select the **correct profile for your paper**
- Close the window.

After completing all settings, adjust any remaining options and close the window.

3. Installing ICC Profiles in the Operating System

If you want to install a profile into the operating system:

- Right-click on the profile file name.
- From the context menu select: **Install Profile**.
